Trakx Top 10 DeFi

as of 01 Jan 2024

About Trakx

Trakx is a global fintech company creating new standards for digital asset investments. Through our trading platform, we offer thematic Crypto Tradable Indices (CTIs) and customised solutions, providing sophisticated investors a high degree of compliance, custody and liquidity. Trakx is registered with the French regulator (AMF).

About the CTI

This instrument is designed to replicate the performance of the 10 largest decentralised finance protocols tokens. DeFi protocols provide a digital alternative to traditional financial services (e.g. loans, savings, payments, trading, insurance), accessible to anyone with an internet connection. Most of the applications of DeFi involve the creation and execution of smart contracts, computer programs intended to be automatically executed on the blockchain when the specific conditions of the contract are met. Decentralised Finance aims to disintermediate and reduce transaction costs. This index essentially captures the explosive adoption of blockchain-based finance.

New Asset Allocation as of 01 Jan 2024

Why Decentralised Finance?

DeFi is often perceived as the most promising blockchain application with its high potential to disrupt the traditional financial system. DeFi applications' worth are around \$200bn (total value locked) as of Jan 2022.

- Lending and Borrowing

Within the DeFi ecosystem, Lending Decentralised Applications (Dapps) are among the most popular thanks to a lack of counterparty risk, the ability to settle transactions instantly, and the lack of credit check requirements. Lending marketplaces are cheaper, faster, and accessible from anywhere with just an internet connection.

- Decentralised Exchange (Dex)

These platforms allow users to trade digital assets without the need for a trusted intermediary (the exchange) to hold their funds. The trades are made through smart contracts directly between user wallets. Blockchain technology can enable the trading and settling of a wide range conventional financial instruments (securities, derivatives...) while eliminating custodians and single points of failure.

- Examples of other financial services

Automated Market Maker ("AMM"): Instead of order books, exchanges rely on AMMs to stand constantly ready to buy & sell smart contracts.

Liquidity pools: Liquidity providers ("LPs") add funds to liquidity pools and earn fees from the trades that happen in their pool.

Historical Performances

Index returns and statistics are for illustration only. Returns are calculated using the historical prices of the constituents. Prior to the inception of this CTI on the 30th August of 2020, CTI performances were calculated using Top 10 digital assets by market capitalisation on a monthly basis. Index returns do not reflect any transaction costs or expenses. Past performance does not guarantee future results.

Risk Factors of the Product

Prospective investors should ensure they fully understand the nature of this product and the extent of their exposure to certain risks. They should consider the suitability of this product as an investment based on their own personal circumstances and financial situation, investment experience, and investment objectives. This product could involve a high degree of risk. Potential investors should be prepared, in certain circumstances, to sustain a total loss of their invested capital. Prospective investors should also consider the following important risk factors below and discuss this investment with their trusted advisors to help verify this product is suitable for their portfolio. Note, the terms and conditions of this product are subject to change during the lifetime of the product.

Market Risks

The general market performance of this instrument is dependent on various endogenous and exogenous factors. Market disruptions such as trading or exchange interruptions, the discontinuation of trading, or other unforeseeable occurrences concerning the respective instrument and/or its underlying assets, the exchanges, market participants, and other factors may take place during the life of this product. Such occurrences can influence the timing of redemption and/or on the market value of this product. Past performance is not a reliable indicator of future performance.

No Dividend Payment

Investors should have no expectation of influence over Trakx's shareholders' general meetings as well as no rights to Trakx's earnings nor other interests in the company, such as dividends.

Termination Risk

Trakx may terminate the product if it doesn't meet the requirements of our clients. In any case, Trakx will announce the delisting thirty (30) days prior to the end date. On the last day, all relevant customer positions on "to-be" delisted CTI will be sold at their NAVs and converted to USDc onto the customers' wallets.

Liquidity Risk

At rebalancing, Trakx only includes constituents that meet minimum liquidity requirements. Trakx is not responsible for the liquidity shortage on the platform, if there is insufficient liquidity on certain constituents, customers may choose to redeem their CTI at a lower price than the NAV. Digital assets may have limited liquidity which may make it difficult or impossible for you to sell or exit a position when you wish to do so. This may occur at any time, including at times of rapid price movements.

Tax Implication

There may be a tax implication on investing in this product. Trakx does not provide any tax opinion. Any Investors should consult with their own tax advisor prior to investing in the product. In addition, investors should be aware that taxation, with respect to the underlying(s) and therefore this product, may (adversely) change over the lifetime of this product.

Foreign Exchange Risk

The investor in the product is exposed to foreign exchange rate risk if the currency of the underlying and settlement currency are not identical.

Volatility of Crypto-Assets

The value of crypto-assets may change significantly, even on an intraday basis. As the volatility of crypto-assets may currently be higher than traditional assets, changes and advances in technology, increases/decreases in fraud, theft, cyberattacks, regulatory changes, and other factors, further stress the potential of exaggerated investment gains or losses in this product. In addition, crypto-assets lack the historical track record of other traditional financial assets, thus increasing performance uncertainty.

Disclaimers

TRAKX SAS and its affiliates (collectively, the "Sponsor") are furnishing this presentation (this "Presentation") to qualified prospective investors for informational purposes only in relation to a potential opportunity to acquire Trakx Digital Asset Index product. This is neither an offer to sell nor a solicitation for an offer to acquire.

Investment in digital currency carries a high degree of risk and volatility and is not suitable for every investor; therefore, you should not risk the capital you cannot afford to lose.

Risks include loss of all capital, liquidity, absence of regulations, execution, counterparty and many more as these are still very experimental technologies. Please consult an independent professional financial or legal advisor to ensure the product meets your objectives before you decide to invest.

This presentation contains an overview summary of the terms of the Digital Asset Index. The summary set forth in this presentation does not purport to be complete. Do not place undue reliance on this presentation. Information may change and be inaccurate, incomplete, or outdated. The information in this presentation is for discussion purposes only and no representations or warranties are given or implied. The information contained in this presentation is subject to further discussion, completion, and amendment. All of the information presented herein is subject to change without notice. For example, the Sponsor may select new service providers such as custodians and data providers. This presentation may be updated to provide additional information on the Digital Asset Index product and its methodology. Any use of this Presentation is on an "as is" and "as available" basis and is at the user's sole risk.

The historical backtested performance of the Trakx Digital Asset Index was calculated by retroactively applying the index methodology (a financial model, or set of rules for calculating index constituents and weightings) to a historical set of data in order to arrive at hypothetical index performance. This performance history is not the performance of any actual account, but rather the result of applying a set of mathematical rules to a set of historical data in order to arrive at the hypothetical results of how the Index would have performed if it had, in fact, been in existence during the historical period. Actual returns from live baskets will differ materially from the backtested, hypothetical Index returns. Hypothetical returns do not reflect the macroeconomic risks of using an investment strategy in a different time period or the financial risk of executing trades in a live contract which include the potential market impact on cryptocurrency prices caused by buying or selling that could cause the model's buy or sell prices to differ from the frictionless trades of the back-tested model. As the backtested returns simulate the historical hypothetical performance of an Index, hypothetical investment fees associated with investing in a smart-contract tracking this hypothetical index (including trading commissions, brokerage fees, management fees, or other fees) have not been included in (by reducing) the historical performance. Although the information on this fact sheet provides some idea of the historic risks involved in investing in a smart-contract designed to track the index, past hypothetical performance is not a guarantee of future returns. Backwards-looking performance cannot predict how any investment strategy will perform in the future.

Under no circumstances shall Trakx have any liability to any person or entity for (a) any loss or damage in whole or part caused by, resulting from, or relating to any transactions related to the digital currencies or (b) any direct, indirect, special, consequential or incidental damages whatsoever.
